Vibratory Feeding System

Tablet Feeding System

Ackley Hartnett offers a complete line of accessories engineered to integrate seamlessly with our precision printing and laser marking production machinery. Our tablet feeding system uses precise vibrations to convey tablets, capsules or confectionery product from one piece of equipment to the next.

Crafted of stainless steel with a clear acrylic lid, this sturdy system keeps pharmaceutical and nutraceutical productions moving quickly and smoothly. Casters provide flexibility to move the Feeder system throughout your production floor.

Level sensor control allows the operator to control and maintain the flow of product running through the feeder, into the ramp printer or laser machine hopper, resulting in the desired output rate.

Features

- 7.68 Cubic Feet
- Precision vibrations feed product into hopper
- Level controller to adjust flow rate
- Stainless steel construction
- FDA & CE Compliant
- Simple, sturdy design keeps feeder in position during operation
- Casters for portability
